UW-Whitewater VPN Use Guide for Staff and Faculty

Updated: April 19, 2016

A Virtual Private Network (VPN) enables users, while off campus, to connect securely to campus resources that are not otherwise available through the internet. Since the campus' network infrastructure is protected from the public internet by a firewall, a VPN solution is necessary to gain access to specific campus resources, such as network storage, while maintaining the security of the system for both users and the network. UW-Whitewater enables VPN access for staff, faculty, and students using the Cisco AnyConnect VPN Software. VPN securely encrypts data transmissions from your off campus computer to the campus network. A valid campus Net-ID and password are required to gain access.

Accessing most campus enterprise technology services, such as Email, calendar, WINS, and other web-based services does not require the use of the VPN.

	Public Internet Access	Requires VPN Connection
